Conserving the Forests, Lakes and Streams of Northeast Michigan

Shoreline Greenbelt Property Evaluation Form

Greenbelts are zones of natural vegetation along the shoreline that are used to help filter pollutants, stabilize shorelines, and provide key habitat. Areas of excessive shoreline erosion along lakes and streams are often in areas where trees and shrubs have been removed. If you have an interest in working with Huron Pines to complete a greenbelt installation/enhancement project, please complete the questions below in order for us to make a preliminary evaluation.

Section 1: Site Information

Property owner name: _____

Riparian Property Address: _____

Waterbody: _____

County, township: _____

Permanent Home Mailing Address: _____

Phone: (____) _____ Email: _____
