

Huron Heartland Invasive Species Network Partner MOU

To keep Northern Michigan healthy and from becoming a landscape made up of invasive species, the Huron Heartland ISN needs a large support group of both public and private entities to share resources and work across jurisdictional boundaries to effectively manage invasive species across the landscape. Your support and interest will help in the protection of the vital natural resources of Northern Michigan.

Bringing partners together from across the region as well as working with the statewide network in a coordinated and cohesive way to address invasive species issues ensures consistent, efficient and effective methods are being used and shared across jurisdictional boundaries. Partnerships can involve individuals, agencies, nonprofit organizations and local units of government who help to prioritize and pool their limited resources in efforts to manage invasive species.

- Benefits of being a partner: receive informational updates via eNewsletters, ease of sharing resources (may be outreach materials, funding, equipment etc.), opportunity to provide input and feedback on HH ISN activities and projects.
- Your role as a partner: provide input at member meetings, share resources as able, strive to attend volunteer opportunities, supply letters of support when requested and able, promote the HH ISN's mission and activities.
- Additional specific support you would like to provide to the Huron Heartland ISN as a partner:

By signing this agreement, you are affirming your/your organization's support to work collaboratively to prevent the introduction and spread of invasive species and to raise awareness to ensure healthy ecosystems and engaged communities across Northern Michigan.
